### Ground

- Arm drag defense, one and two arms.
- Hair drag defense.
- Side mount escape.
- Knee on belly escape.
- Mount escape.
- Tackle defense: sprawl.

# Warrior Women Test

## Drill 5: Free Flow

For four (4) minutes, a partner will be giving the student different forms of attacks and the student should respond with the appropriate defense.

We'll be evaluating the student reflexes. It's ok if the technique is not quite perfect but the reaction has to be immediate.

If the student takes more than 3 seconds to respond, a point will be deducted.

The "attacker" should have a reasonable level of intensity, not so easy and not so hard. At the same time, there should be no announcing of the attack. The only time where communication is allowed would be to facilitate different positions, e.g. "could you go to the wall?", "could you go to the ground?", etc.

The attacker should give indicators from different positions: standing, mount, guard and side mount.

The student should flow from one technique to the other. E.g. when escaping mount using elbow escape they will be in guard, from there they should use a guard technique, etc.

Students should only use the techniques taught in the Warrior Women course.

If the time runs out and the student is in the middle of a technique, go ahead and finish the move.

Be aware of your breathing and show us that you can remain calm under pressure.

There should be no edits or cuts in the video. The drill (and all previous drills) should be recorded in one take. It's ok to record each drill on different days and submit them separately.

Let us know if for whatever reason such as an injury or a medical condition the student is unable to execute a particular technique.

Student starts with a score of 100 and gets a point deduction for major mistakes in the execution of techniques in drills 1-4; or lack of reflexes in drill 5, Free Flow.

The passing score is 85.
